

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claims 1. - 8 (canceled)

9. (original) An apparatus for editing photographic images comprising:  
means for transporting a continuous roll of said images from a feed point to a discharge point along a longitudinal axis;  
an imaging station intermediate said feed point and said discharge point;  
an illumination means proximate said imaging station;  
means for detecting the position of each of said photographic images in relation to said continuous roll;  
means for marking each of said individual photographic images on said continuous roll with a discrete identifying code;  
digital camera means;  
means for positioning said digital camera means in relation to said longitudinal axis;  
computer means for controlling said positioning means;  
means for displaying a positive image of said photographic image;  
input means for accepting editing information for said photographic images;  
digital storage means for storing digital data comprising photographic image data derived from said digital camera, data pertaining to the position of said digital camera and data obtained from said input means.

10. (original) The apparatus of claim 9, which further comprises data transmission means for transmitting said photographic image data to a secondary editing station.

11. (original) The method of claim 10 further comprising means for combining editing data from said secondary editing station with said photographic

image data, said data pertaining to the position of said camera and said data obtained from said input means.

12. (previously presented) In an apparatus for capturing a series of digital images from a medium containing a series of visible images comprising a digital camera, apparatus adapted to position media, a light source for the media, an imaging station and an encoder that places an identification on each of said series of visible images, the improvement comprising a selectively operated computer controlled camera positioner, and memory containing information regarding said positioning of said camera as digital data.
